EDUCATION

Mapua Malayan Colleges Laguna — Cabuyao, Laguna
Bachelor of Science in Computer Science, Specialization in Data Science and Analytics — *Aug. 2022 – Dec. 2026*
- Candidate for Cum Laude; Consistent Dean's Lister 2022-2026
- Iskolar ng Laguna 2024-Present

WORK EXPERIENCE

PurpleBug Inc. — Makati, Philippines
IT Business Analyst Intern — *May 2026 – Aug. 2026*
- Developed an AI-powered B2B lead generation system automating lead discovery, enrichment, qualification, and management using n8n workflow automation.
- Designed and developed an interactive analytics dashboard using React.js, Vite, Tailwind CSS, Axios, React Router, and React Leaflet to visualize lead data and insights.
- Validated and reconciled 3,000+ records, identifying data inconsistencies and ensuring accuracy, completeness, and adherence to established standards.
- Conducted User Acceptance Testing (UAT), documented system issues, verified resolutions, and supported quality assurance activities prior to deployment.
- Prepared and maintained 15+ Content Specification Documents (CSDs) to support standardized data requirements and CMS implementation projects.

PROJECTS

PhilLeads: AI-Powered B2B Lead Generation System | *React.js, n8n, Vite, Tailwind CSS, JavaScript* *2026*
- Built an AI-powered B2B lead generation system automating 100+ lead discovery, enrichment, qualification, and management via n8n workflow automation.
- Developed an interactive analytics dashboard featuring charts, searchable tables, company profiles, and location-based insights to visualize lead data and support decision-making.
- Analyzed and organized lead and company data to support data-driven prospect evaluation, filtering, and prioritization.

GenesisAI: Animal Disease Traceability Framework | *Hyperledger Fabric, React, Python, Leaflet.js, Javascript, Go* *2026*
- Top 16 Grand Finalists of 240+ Teams & Top 4 of Public Health Track in ASEAN AI Hackathon 2026
- Developed an animal disease traceability framework managing 500+ records to support data monitoring, traceability, and analysis across the livestock food supply chain.
- Integrated risk scoring and location-based data visualization to help identify potential disease risks and support data-driven monitoring and decision-making.

ParkPeek: Predictive Parking Occupancy System | *Python, React Native, Scikit-learn, Time-Series* *2025*
- Developed a predictive parking system covering 300+ parking slots, using clustering algorithms to analyze occupancy patterns and identify parking trends.
- Applied time-series analysis to forecast peak parking demand and predict parking availability, supporting data-driven parking management and planning.

Heart Disease Risk Prediction | *Python, React, Neural Networks, Clustering* *2024*
- Developed a web-based healthcare system that predicts patient heart disease risk levels (Low, Mid, High) using a neural network model trained on the Kaggle dataset.
- Designed the system to analyze patient health data and provide real-time risk assessment, demonstrating the practical application of machine learning and data analytics in healthcare.

COMPETITIONS & HACKATHONS

ASEAN AI Hackathon 2026| Top 16 Grand Finalists of 240+ Teams & Top 4 of Public Health Track *2026*

CERTIFICATIONS

Data Analytics and Essentials | Cisco Networking Academy *2026*
Google Data Analytics Professional| Google *2026*
IBM Data Science | IBM *2026*
CompTIA Tech+ | CompTIA *2025*
Google Cloud Security | Google Cloud Skills Boost *2024*

SKILLS

Technical Skills: Python, Power BI, Microsoft Excel, SQL, N8N, React, React Native, VueJs, JavaScript, C#, HTML
Soft Skills: Adaptability, Project Management, Analytical Thinking, Problem Solving, Technical Communication
