

COLLEGE OF COMPUTER AND INFORMATION SCIENCE

Academic Year 2025 – 2026

CS199F (CS PRACTICUM NARRATIVE REPORT)

Submitted by:
Emmanuel Jacob C. ELLANA

Submitted to:
Jonalyn G. Ebron

Submitted to the Faculty of Mapúa Malayan Colleges Laguna
In Partial Fulfillment of the Requirements for the degree of

Bachelor of Science in Computer Science

Overview of the Practicum Engagement

Company Background

The student interned at PurpleBug Inc., a Philippine-based digital marketing and technology company that provides innovative digital solutions to help businesses improve their online presence, streamline operations, and enhance customer engagement. The company offers services such as website design and development, business automation, artificial intelligence (AI) solutions, Software-as-a-Service (SaaS) applications, chatbot development, and digital marketing. One of its flagship products is Smicos, an AI-powered chatbot platform that helps businesses automate customer interactions and improve communication through intelligent conversational workflows.

PurpleBug Inc. works with both private organizations and government agencies by delivering customized software solutions, website management services, content migration, documentation, and business process automation. Throughout the internship, the student observed a collaborative and project-oriented work environment where developers, business analysts, project managers, and designers worked closely to deliver high-quality digital solutions. The company also promotes continuous learning and innovation, making it an ideal environment for interns to gain practical industry experience while developing both technical and professional skills.

Nature of Assignments or Tasks Given

During the internship, the intern was assigned to the IT Business Analyst Department, where various responsibilities were given to support the company's software development, technical documentation, website management, and business automation projects. The internship combined both development-oriented and documentation-oriented tasks, allowing the intern to gain practical exposure to different phases of software development and project implementation. Throughout the practicum, assignments were distributed by the supervisors according to project priorities, while daily progress was monitored through Daily Stand-Up (DSU) reports and regular consultations with the assigned mentors. These daily updates enabled the supervisors to monitor

accomplishments, provide technical guidance, and ensure that assigned tasks were completed according to schedule.

The primary responsibility of the internship was the development of an AI-powered B2B Lead Generation System, which became the intern's major project throughout the practicum. The project involved studying workflow automation, integrating multiple online services, processing business information, and automating lead generation processes. To further enhance the usability of the system, the intern proposed the development of a web-based analytics dashboard, which was approved by the supervisor. The dashboard was designed to display collected business information through an organized and user-friendly interface, making it easier to visualize and analyze generated leads.

In addition to the primary project, the intern was assigned several supporting responsibilities involving technical documentation and website-related projects for different clients. These included preparing Customer Solution Documents (CSD), developing User Training Documentation, documenting Smicos AI chatbot workflows, performing web scraping for website migration projects, organizing content inventories, and assisting in the migration of website content. Several government and private sector projects required detailed documentation of website interfaces, content structures, and user workflows to support future development and maintenance activities.

The internship also involved collaboration with different supervisors and team members throughout various stages of each project. Assigned tasks were often discussed during meetings before implementation, while completed outputs underwent review and revision based on feedback from the development team. This collaborative process enabled the intern to understand industry practices in documentation, software development, and project management while continuously improving technical writing, analytical thinking, communication, and organizational skills. Through consistent exposure to real client projects and professional workflows, the internship provided valuable experience that bridged academic learning with actual industry practices.

Total Hours Rendered

The internship was completed in accordance with the practicum requirements of Mapúa Malayan Colleges Laguna, with a total of 480 hours successfully rendered at PurpleBug Inc. The training began with Phase 1, which consisted of company orientation and onboarding activities. During this phase, the intern became familiar with the company's work environment, organizational policies, development workflow, and the tools and technologies that would be used throughout the internship. This initial training provided the intern with the foundation needed to effectively perform the assigned responsibilities.

The majority of the internship hours were completed during Phase 2, which focused on hands-on training, skill development, and project implementation. During this phase, the intern

worked on the primary project, the AI-Powered B2B Lead Generation System, while also developing a React.js analytics dashboard to visualize the generated business data. In addition, the intern completed various supporting tasks such as preparing Customer Solution Documents (CSD), User Training documentation, Smicos chatbot workflow documentation, web scraping, website migration, and content inventory management for different client projects. Progress was monitored through Daily Stand-Up (DSU) meetings, regular consultations with supervisors, and weekly internship journals.

The final stage of the internship, Phase 3, involved applying the knowledge and skills acquired throughout the training to actual client projects while completing assigned deliverables independently. This phase enabled the intern to further strengthen both technical and professional competencies by working on real-world software development and documentation tasks while collaborating with different members of the development team. Overall, the distribution of internship hours provided the intern with a well-balanced learning experience that enhanced software development, business analysis, documentation, communication, and problem-solving skills, ultimately preparing the intern for future opportunities in the information technology industry.

Table 1
Summary of Internship Hours Rendered

Phase	Description	Hours
Phase 1	Company Orientation and Initial Training – Company orientation, introduction to the organization, onboarding activities, familiarization with company policies, development tools, Smicos platform, GitHub repositories, and project workflows.	40 Hours
Phase 2	OJT Practice, Skill Development, and Project Implementation – Hands-on training through software development, AI workflow automation using n8n, React.js dashboard development, Smicos chatbot workflow documentation, Customer Solution Documents (CSD), User Training documentation, web scraping, website migration, content inventory management, and collaboration with supervisors through Daily Stand-Up (DSU) meetings and project reviews.	320 Hours

Phase	Description	Hours
Phase 3	Application of Knowledge to Actual Client Projects – Application of acquired knowledge and technical skills in completing real client projects, including the AI-Powered B2B Lead Generation System, React.js Analytics Dashboard, documentation deliverables, website migration tasks, and other software development and business analysis assignments that contributed to the company's ongoing projects.	120 Hours
Total Hours Rendered		480 Hours

Presentation of Output

Main Project: AI-Powered B2B Lead Generation System

The primary project assigned to the intern throughout the practicum was the development of an AI-Powered B2B Lead Generation System designed to automate the process of collecting, enriching, organizing, and managing business lead information. The project was developed using n8n, an open-source workflow automation platform, which enabled the integration of multiple services, databases, and application programming interfaces (APIs) into a unified automated workflow. The primary objective of the system was to reduce the manual effort required in gathering business information while improving the speed, accuracy, and organization of lead generation activities.

Figure 1. AI-Powered B2B Lead Generation System N8N Workflow

The project was completed through multiple development phases that gradually introduced new functionalities and workflow improvements. The initial stages involved configuring the development environment, installing project dependencies, and understanding the overall workflow architecture of the system. As development progressed, the intern implemented API integrations, automated data retrieval processes, configured HTTP requests, managed workflow variables, and connected external services required for data enrichment. Several third-party services, including Hunter.io, Apollo.io, People Data Labs (PDL), Groq AI, and Baserow, were integrated into the workflow to automate business information retrieval and lead qualification. Throughout the development process, the intern also performed extensive debugging and testing to resolve workflow errors, optimize API requests, and improve the overall reliability of the automation pipeline.

One of the most significant challenges encountered during the project involved understanding workflow automation concepts and integrating multiple APIs into a single automated process. Since the intern had no prior experience with n8n before the internship, considerable time was invested in studying workflow logic, automation principles, HTTP requests, variables, and API authentication methods. Additional challenges included API rate limitations imposed by external services such as Hunter.io and Apollo.io, which required careful testing and workflow adjustments to ensure uninterrupted system execution. Through continuous research, experimentation, and guidance from the internship supervisors, these challenges were successfully addressed, allowing the project to reach full functionality.

The completed system successfully automated several previously manual processes involved in B2B lead generation. It enabled the automatic collection, organization, and enrichment of company information while significantly improving workflow efficiency. The project also strengthened the intern's understanding of workflow automation, API integration, database management, debugging techniques, and software development practices commonly used in modern business applications.

React.js Analytics Dashboard

Although not originally included as part of the assigned project, the intern proposed the development of a web-based analytics dashboard to complement the AI-Powered B2B Lead Generation System. The objective of the dashboard was to transform the generated business data into an organized and interactive interface that would allow users to easily visualize and analyze collected leads.

The dashboard was developed using React.js and was designed with responsiveness, usability, and data visualization in mind. It displays business leads through interactive charts, statistical summaries, searchable tables, company profile views, and location-based visualizations. Information collected by the automated n8n workflow is presented through a clean user interface

that allows users to quickly identify trends, analyze business categories, and review detailed company information.

Figure 2. Executive Analytics & Industry Breakdown Dashboard

Figure3. Leads Density Heatmap by Industry & City

Figure 4. Geographic Distribution Map with Company Details

Throughout the development process, the intern focused on creating an intuitive interface that emphasized readability, accessibility, and user experience. Multiple dashboard components were implemented, including analytics cards, charts, lead tables, search filters, pagination controls, and company profile drawers. Several design improvements and interface refinements were also introduced to enhance responsiveness across different screen sizes and provide a more professional user experience. The completed dashboard served as the frontend visualization component of the Lead Generation System, demonstrating the practical integration of workflow automation with modern web application development.

Supporting Tasks/Assignments

Smicos Chatbot Workflow Documentation

Another significant responsibility assigned during the internship involved the documentation of Smicos AI chatbot workflows for various client projects. Smicos is an AI-powered chatbot platform developed by PurpleBug Inc. that enables organizations to automate customer interactions through configurable conversational workflows. The intern was tasked with studying existing chatbot implementations and preparing detailed documentation describing the overall chatbot logic, workflow structure, system behavior, and user interactions.

standards. The experience also emphasized the importance of creating clear and organized documentation that can be easily understood by developers, business analysts, and future project stakeholders.

Web Scraping

Throughout the internship, the intern was assigned several web scraping tasks that supported website migration and content management projects for various clients. These assignments required collecting existing website information and organizing it into structured formats that could later be transferred into updated websites and content management systems.

Figure 6. Web Scraping Sample Screenshot

The web scraping activities involved extracting webpage content, HTML elements, images, documents, organizational information, committee members, board of directors, regional chamber information, and other website resources. The collected information was carefully reviewed, cleaned, and organized before being transferred into migration documents or content inventories. Several government and private sector projects, including PCCI and DTI, required extensive data gathering to ensure that website content remained complete and accurate throughout the migration process.

These assignments allowed the intern to understand the importance of structured data collection during website redevelopment and migration projects. The experience also improved data validation, organization, and information management skills while demonstrating how automated and manual data collection processes contribute to efficient website maintenance.

Customer Solution Documents (CSD)

The preparation of Customer Solution Documents (CSD) formed a significant portion of the internship responsibilities. Customer Solution Documents provide detailed descriptions of website functionality, user interface components, navigation flows, and system behavior. These documents serve as important references for developers, quality assurance personnel, project managers, and future maintenance teams.

Figure 6. Customer Solutions Documents

Throughout the practicum, the intern prepared and updated numerous CSDs for different client websites and content management systems. Each document required careful observation of existing website features, accurate descriptions of page components, user interactions, navigation processes, and functional behaviors. Various projects such as Hotel Dreamworld, PCCI, DTI, and Clark Development Corporation involved updating and refining CSD documentation based on current website implementations.

Working on these documents significantly enhanced the intern's technical writing skills while improving the ability to analyze software interfaces from a business and user perspective. It also reinforced the importance of maintaining complete and accurate documentation throughout the software development lifecycle.

User Training Documentation

Another major responsibility assigned during the internship involved preparing User Training Documentation for different client systems. These documents were designed to help end

users understand system functionality by providing clear instructions on how to perform various tasks within the software applications.

Figure 7. User Training Documentation

The intern prepared user training materials for several client projects, including the PCCI CMS and DTI systems. The documentation described step-by-step procedures, page navigation, content management functions, and user workflows using organized instructions and supporting screenshots. The objective was to create user-friendly manuals that would enable clients to efficiently operate their respective systems with minimal technical assistance.

Developing these documents improved the intern's ability to communicate technical concepts using language appropriate for end users. The experience also demonstrated the importance of effective user documentation in ensuring successful software implementation and long-term client support.

Content Inventory Management

Content Inventory Management was one of the recurring responsibilities assigned throughout the practicum. This activity involved identifying, organizing, categorizing, and documenting all existing website content prior to migration or redevelopment.

Figure 8. Content Inventory Management Sample Screenshot

The intern prepared content inventories for multiple client websites, including the Philippine Chamber of Commerce and Industry (PCCI) and Clark Development Corporation. Each inventory documented website pages, downloadable files, images, navigation structures, content status, and related information required for migration planning. The inventories served as comprehensive references that enabled developers and project managers to monitor website content throughout redevelopment and migration projects.

Completing these inventories strengthened the intern's organizational, analytical, and documentation skills while highlighting the importance of structured information management in software development and website maintenance. The experience also demonstrated how careful planning and documentation contribute to the successful completion of digital transformation projects by ensuring that valuable website content is accurately preserved and transferred to new systems.

Synthesis of the Practicum Engagement

Learnings

The practicum at PurpleBug Inc. provided the intern with valuable opportunities to apply classroom knowledge in a professional software development environment while acquiring new technical and professional competencies. Throughout the internship, the intern gained hands-on experience in workflow automation, software documentation, website management, and business analysis by participating in actual client projects. Working on diverse assignments exposed the intern to the complete software development process, from planning and documentation to implementation, testing, and project maintenance.

One of the most significant technical learnings was the development of the AI-Powered B2B Lead Generation System using n8n. Through this project, the intern developed a deeper understanding of workflow automation, API integration, HTTP requests, variables, database connectivity, and business process automation. The project also introduced the intern to various third-party services such as Groq AI, Hunter.io, Apollo.io, People Data Labs (PDL), and Baserow, demonstrating how multiple technologies can be integrated to automate complex business processes. In addition, developing the React.js analytics dashboard enhanced the intern's skills in user interface design, responsive web development, component-based architecture, and data visualization.

Beyond software development, the internship strengthened the intern's technical documentation skills through the preparation of Customer Solution Documents (CSD), User Training manuals, Smicos chatbot workflow documentation, website migration documents, and content inventories. These responsibilities improved the intern's ability to analyze software systems, organize information, and communicate technical concepts clearly and accurately. The intern also learned the importance of maintaining comprehensive documentation to support software maintenance, user adoption, and future project development.

The practicum likewise contributed significantly to the intern's professional growth. Daily Stand-Up meetings, regular consultations with supervisors, and collaborative project discussions enhanced communication, teamwork, time management, adaptability, and problem-solving skills. Working under project deadlines required careful task prioritization and continuous learning, allowing the intern to become more confident in handling responsibilities within a professional workplace. These experiences emphasized that technical expertise alone is not sufficient in the industry, as effective collaboration, professionalism, and continuous improvement are equally important for successful project execution.

Realization

The internship provided the intern with valuable insights into the realities of the software development industry and the responsibilities of an IT Business Analyst. Throughout the practicum, the intern realized that software development extends far beyond writing code. Every successful software project depends on proper planning, documentation, communication, testing, collaboration, and continuous refinement. Observing how different teams worked together to deliver client solutions demonstrated the importance of coordination among developers, business analysts, project managers, designers, and clients in achieving project objectives.

The intern also realized the importance of adaptability and continuous learning in the field of information technology. Many of the technologies and tools used during the internship, including workflow automation platforms, artificial intelligence services, and technical documentation standards, were initially unfamiliar. However, through consistent practice,

research, guidance from supervisors, and hands-on project experience, the intern was able to gradually develop confidence in using these technologies. This experience reinforced the understanding that learning does not end in the classroom but continues throughout one's professional career.

Another important realization was the value of technical documentation and business analysis in software development. Initially, the intern perceived documentation as a supporting task compared to software development. However, working on Customer Solution Documents, User Training manuals, chatbot workflow documentation, and content inventories revealed that documentation plays a critical role in ensuring project continuity, effective communication, and successful system implementation. Well-prepared documentation serves as an essential reference for developers, clients, and future project teams, making it a vital component of every software project.

Most importantly, the internship helped the intern gain greater confidence in pursuing a career in software development and business analysis. Successfully completing a major automation project while contributing to multiple client engagements demonstrated the ability to adapt to industry standards, manage responsibilities, and continuously improve technical competencies. The practicum reinforced the intern's passion for developing technology-driven solutions while inspiring a commitment to lifelong learning and professional growth within the field of information technology.

Conclusion

The practicum at PurpleBug Inc. served as a valuable bridge between academic learning and professional industry experience. Throughout the internship, the intern was given the opportunity to participate in meaningful projects involving workflow automation, software development, technical documentation, website migration, content management, and business analysis. These experiences provided practical exposure to real-world software development practices while allowing the intern to contribute to projects that supported actual client requirements.

The successful completion of the AI-Powered B2B Lead Generation System, together with the development of a React.js analytics dashboard and various supporting documentation projects, demonstrated the intern's ability to apply theoretical knowledge in solving practical business problems. In addition to technical competencies, the internship strengthened communication, collaboration, analytical thinking, organization, and professional work ethics through continuous interaction with supervisors and project teams. Each completed assignment contributed to the intern's overall development as a future IT professional capable of adapting to the demands of the software industry.

Overall, the practicum achieved its primary objective of preparing the intern for future professional responsibilities by providing meaningful industry experience, technical training, and opportunities for continuous learning. The knowledge, skills, and values gained throughout the internship have established a strong foundation for future career growth in software development, business analysis, and technology consulting. The intern expresses sincere gratitude to PurpleBug Inc., the internship supervisors, colleagues, and Mapúa Malayan Colleges Laguna for providing an enriching learning environment that fostered both personal and professional development.

EDUCATION

Mapua Malayan Colleges Laguna

Cabuyao, Laguna

Bachelor of Science in Computer Science, Specialization in Data Science and Analytics

Aug. 2022 – Present

- Consistent Dean's Lister 2022-2026
- Iskolar ng Laguna 2024-Present

Our Lady of Fatima University Laguna

City of Santa Rosa, Laguna

Science, Technology, Engineering, and Mathematics (STEM) Strand

Aug. 2020 – July 2022

- Graduated with High Honors

PROJECTS

Animal Disease Traceability Framework | *Hyperledger Fabric, Blockchain, React, Javascript, Go*

2026 – Present

- Designing a decentralized framework for real-time animal disease tracking within the food supply chain to improve food safety and transparency.
- Implementing smart contracts (chaincode) to automate data verification and audit trails across stakeholders.

ParkPeek: Parking Occupancy System | *Python, React Native, Scikit-learn, Time-Series*

2025

- Developed a mobile-app based parking system utilizing clustering algorithms to identify occupancy patterns.
- Integrated a peak-volume predictive model using time-series analysis to provide users with real-time parking availability forecasts

Heart Disease Risk Prediction | *Python, React, Neural Networks, Clustering*

2024

- Developed a web-based healthcare system that predicts patient heart disease risk levels (Low, Mid, High) using a neural network model trained on the Kaggle dataset.
- Designed the system to analyze patient health data and provide real-time risk assessment, demonstrating the practical application of machine learning and data analytics in healthcare.

ORGANIZATIONS

Junior Philippine Computer Society (JPCS)

2023 – 2026

- Member of JPCS at Mapúa Malayan Colleges Laguna and actively participating in academic and technology-related activities within the organization.

Liability Waiver

MAPUA
MALAYAN COLLEGES
LAGUNA

REVISION NO.: 00
REVISION DATE: May 10, 2016

STUDENT TRAINING AGREEMENT AND LIABILITY WAIVER

IMPORTANT INFORMATION

- THIS FORM IS TO BE ACCOMPLISHED AND SUBMITTED BY STUDENT TRAINEE TO THE PRACTICUM ADVISER BEFORE STARTING THE PRACTICUM.
- READ AND UNDERSTAND THE PROVISIONS OF THIS AGREEMENT AND WAIVER.
- ENSURE THAT ALL SIGNATORIES SIGN THE FORM.

I, Emmanuel Jacob C. Ellana, and a student of MALAYAN COLLEGES LAGUNA (hereinafter referred to as "MCL", do hereby voluntarily undergo on-the-job training at PurpleBug Inc., hereinafter referred to as the "Host Company", located at Unit 801, Antel Corporate Center, Valero, Makati City under the following terms and conditions:

a. That the practicum training will commence on May 4, 2026 and ends on July 27, 2026 and will have to complete a minimum of 480 hours required for the on-the-job training;

b. That I shall observe proper decorum and act professionally at all times and abide by the Company's rules and regulations and comply with those imposed for the training program, otherwise, I shall be excluded from further participation;

c. That in the course of my training program, I may have access to information which may be of confidential in nature and proprietary to the Company, for which I may be required to execute a confidentiality and non-disclosure agreement as a prerequisite to my participation in the training program;

d. That the time I will spend on the training program in the completion of my on-the-job training requirements will not and should not be interpreted or construed as working hours and should be regarded as non-compensable. Provided that, the Company may, as a unilateral act of liberality or generosity on their part, provide me with meal, travel, transportation allowances, accommodations, etc.;

e. That I fully understand that notwithstanding the allowances enumerated in the preceding section which I may receive, there exists no labor-management and/or employer/employee relationship between me and the Company where I will undergo my training;

f. That I shall exercise due care and diligence in the tasks assigned to me and personally be made answerable for any and all liabilities for damage to property or injury to third person, which may be occasioned by my intentional or negligent acts during the course of my on-the-job training;

g. That I shall likewise hold the Host Company and MCL free and harmless from any and all liability and responsibility for any sickness or injury to myself and third parties and damage to property which I may sustain and/or may occur at any time during the training program, including time spent in traveling to and from any and all premises and locations where I may be required to go to as part of my training program;

h. That the Company reserves the right to discontinue my training on reasonable grounds upon written notice to MCL and myself. Additionally, in the event my training program is discontinued for reasons attributable only to myself, I may be made to reimburse the Host Company for any/all the allowances, stipends, etc., which I may have received from them during and prior to the termination of my training program;

i. That in addition to my liability under section *g* and for the pre-termination of my training program provided for under section *h* hereof, I may be subjected further to disciplinary action in accordance with the school's student manual and/or be a ground for disqualification from graduation;

Signed on this 8th day of May, 2026.

Training Plan

REVISION NO.: 00
REVISION DATE: May 10, 2018

TRAINING PLAN

NAME	Emmanuel Jacob C. Ellana	COURSE CODE	CS199F
PROGRAM & STUDENT NO.	BSCS 2022153602	COURSE TITLE	CS PRACTICUM

STUDENT OUTCOMES

CO1: Identify and analyze business processes and propose technology-driven solutions to the problem faced by the organization.

CO2: Apply the different concepts of system analysis and design, data engineering, database management, programming, and data analysis skills to support problem-solving and system improvement.

CO3: Acquire new knowledge and experience while in the organization.

AREAS / PHASES OF TRAINING AND TIME ALLOTMENT

40 hours: Company Orientation
320 hours: OJT Practice and Skill Application Coaching, Mentoring, and Project Application
120 hours: Apply learnings in project that is relevant to the plant and the student

EVALUATION GUIDELINES & COURSE OUTCOMES	
DEMONSTRATION OF SOFT SKILLS (40%)	DEMONSTRATION OF TECHNICAL SKILLS (60%)
KEY AREAS COMMUNICATION SKILLS (20%) Relate to co-trainees/supervisors terminologies and rules Recite procedures and instructions needed for the tasks Identify and describe safety signs and symbols Ask critical questions related to the tasks Produce well-written regular and incident reports Prepares and presents reports using Information and Communication Technology (ICT) PROFESSIONAL DEPORTMENT (20%) Observes proper grooming and attire Reports to work regularly on time and as necessary, even beyond prescribed working hour Acts according to the job description given by the company Willing to accept new tasks apart from the usual routine and responsibilities Delivers quality output on time Demonstrates respect for different individuals INITIATIVE (+5%) Volunteers to perform tasks beyond routine tasks	KEY AREAS Company Orientation (4.58%) Able to understand company standards, tools, and onboarding protocols Able to navigate and operate Smicos AI chatbot platform Able to set up and configure required tools and environments (N8N, Baserow, Apollo.io, Docker, Groq AI) OJT Practice and Skill Application Coaching, Mentoring, and Project Application (36.67%) Able to build and manage an Apollo.io/Hunter.io → N8N → Baserow automation pipeline Able to integrate and configure Groq AI API with prompt engineering for lead categorization Able to integrate Apollo.io / Hunter.io enrichment APIs with proper error and rate limit handling Apply learnings in project that is relevant to the plan and the student (13.75%) Able to conduct end-to-end testing of the complete lead generation and enrichment pipeline Able to develop and deliver project documentation and knowledge transfer materials Able to present the final project effectively to company stakeholders INITIATIVE (+5%) Volunteers to perform tasks beyond routine tasks

DATE	May 4, 2026 to May 8, 2026	AREA ASSIGNMENT	AI Development, Chatbot Development
TASK	Chatbot Development, RAG System Train	SHIFT/TIME	9am-6pm

May 4, 2026

I focused on learning Smicos since I was still unfamiliar with the platform, exploring chatbot workflows and testing different nodes and their functions. I also gained a better understanding of the internship environment, development tools, and overall workflow process.

May 5, 2026

I worked on completing the Smicos chatbot workflow and setting up the dependencies for the 01-RAG-Chat task from GitHub. During the process, I learned how button and step nodes function in Smicos and became more familiar with the purpose of dependencies, although I encountered some confusion with the setup since I was still adjusting to macOS.

May 6, 2026

I worked on Exercises 1, 2, and 3 of the 01-RAG-Chat task in the PurpleBug AI Lab while continuing to study how the system works. I learned the logic behind Retrieval-Augmented Generation (RAG) and how AI chatbots retrieve and use information from data sources, while also troubleshooting several errors encountered during the exercises.

May 7, 2026

I continued working on Exercises 3 and 4 of the 01-RAG-Chat task and later started the Smicos Purple Academy chatbot project. I learned how embeddings, similarity search, and prompt engineering affect the behavior and responses of AI models, while also improving my debugging and problem-solving skills.

May 8, 2026

I spent the day reviewing and refining some of my previous tasks, including checking chatbot flows, fixing small issues, and organizing documentation files for ongoing projects. I also continued practicing with Smicos and RAG-related tasks to strengthen my understanding of chatbot development and workflow integration.

DATE	May 11, 2026 to May 15, 2026	AREA ASSIGNMENT	AI Development and Automation
TASK	Smicos Chatbot, RAG & ETL, N8N Setup	SHIFT/TIME	9am-6pm

May 11, 2026

I worked on the Purple Academy Smicos chatbot workflow and its documentation while also installing the dependencies for the 02-ETL task in the PurpleBug AI Lab. During the process, I learned how chatbot workflows are logically connected through nodes to create a smoother and more guided user experience.

May 12, 2026

I completed and presented the Purple Academy Smicos chatbot workflow and documentation while continuing to improve my understanding of the platform. I also learned several Smicos tips and tricks, became more familiar with VS Code commands, and started preparing the dependencies and stack for my n8n project.

May 13, 2026

I worked on fixing and refining bugs in the 01-RAG-Chat and 02-ETL-Pipeline tasks while reviewing how the system functions. Through this, I learned more about dependencies and how they affect the logic and behavior of RAG algorithms and AI workflows.

May 14, 2026

I focused on finishing the Smicos Purple Academy modules, documentation, and the tasks assigned by Ms. Shaina. I also learned more about Smicos workflow integration, especially how chatbot flows can be connected and embedded into websites effectively.

May 15, 2026

I completed the Week 1 setup for the n8n lead generation project and finalized the task assigned by Ms. Shaina. I also learned how to install and configure dependencies for Baserow, LeadGen, and Docker, which are important components of the n8n automation project.

DATE	May 18, 2026 to May 22, 2026	AREA/ASSIGNMENT	AI Automation & Workflow Development
TASK	N8N lead gen, Automation workflow, Knowledge base	SHIFT/TIME	9am-6pm

May 18, 2026

I worked on the Purple Academy Smicos chatbot workflow and its documentation while also installing the dependencies for the 02-ETL task in the PurpleBug AI Lab. During the process, I learned how chatbot workflows are logically connected through nodes to create a smoother and more guided user experience.

May 19, 2026

I completed and presented the Purple Academy Smicos chatbot workflow and documentation while continuing to improve my understanding of the platform. I also learned several Smicos tips and tricks, became more familiar with VS Code commands, and started preparing the dependencies and stack for my n8n project.

May 20, 2026

I worked on fixing and refining bugs in the 01-RAG-Chat and 02-ETL-Pipeline tasks while reviewing how the system functions. Through this, I learned more about dependencies and how they affect the logic and behavior of RAG algorithms and AI workflows.

May 21, 2026

I focused on finishing the Smicos Purple Academy modules, documentation, and the tasks assigned by Ms. Shaina. I also learned more about Smicos workflow integration, especially how chatbot flows can be connected and embedded into websites effectively.

May 22, 2026

I completed the Week 1 setup for the n8n lead generation project and finalized the task assigned by Ms. Shaina. I also learned how to install and configure dependencies for Baserow, LeadGen, and Docker, which are important components of the n8n automation project.

DATE	June 1, 2026 - June 5, 2026	AREA ASSIGNMENT	Website Documentation, Content Migration, and Technical Documentation
TASK	PCCI Website Documentation, Data Cleaning, and User Training Documentation	SHIFT/TIME	9am-6pm

June 1, 2026:

I worked on running the Python automation for the PCCI document data and started the data cleaning process. During this task, I learned the importance of transforming raw Markdown (MD) files into structured and meaningful information to improve the quality and usability of the knowledge base.

June 2, 2026:

I worked on the PCCI website CSD documentation and successfully completed the PCCI data document cleaning task. I also gained a better understanding of how to properly document a website's user interface for BRD and CSD purposes while ensuring that Markdown files were clean, organized, and suitable for documentation.

June 3, 2026:

I completed the PCCI CMS CSD documentation and further improved my understanding of documenting website features, user interfaces, and workflows. This task helped me strengthen my technical documentation skills and organize information in a clear and structured manner.

June 4, 2026:

I worked on the DTI Counselor and DTI Mentor User Training documentation and successfully completed it. Through this task, I learned how to create user training materials using information from BRD and CSD documents, making technical processes easier for end users to understand.

June 5, 2026:

I completed the extraction and organization of data such as authors, statements, and other relevant information from DTI PDF files for migration to the DTI website. This task improved my understanding of accurately extracting, validating, and organizing content to ensure a smooth and reliable website migration process.

DATE	June 8, 2026 - June 12, 2026	AREA ASSIGNMENT	Technical Documentation, AI Automation, and Content Management
TASK	PCCI Documentation and Migration Content Inventory, and n8n Lead Generation Development	SHIFT/TIME	9am-6pm

June 8, 2026:

I worked on the PCCI content inventory and updated the assigned sections of the PCCI website CSD documentation. During this task, I learned more about content inventory management and how organizing website content helps maintain consistency and supports future website updates and migration.

June 9, 2026:

I completed the PCCI content inventory and reviewed the collected website content to ensure it was accurate and well organized. This task gave me a better understanding of the importance of auditing website content before migration and maintaining complete documentation for future development.

June 10, 2026:

I started and completed Phase 4 of the n8n Lead Generation project by building and testing workflow automations. I also learned how to integrate APIs such as Hunter.io and People Data Labs (PDL) to enrich lead information and gained more experience in handling API responses and workflow automation.

June 11, 2026:

I worked on the PCCI Smicos chatbot workflow documentation by documenting the chatbot logic, conversation flow, and node connections. This task improved my understanding of documenting chatbot workflows in a structured manner, making them easier for developers and stakeholders to understand.

June 12, 2026:

I continued refining the PCCI Smicos chatbot workflow documentation by reviewing the chatbot flow and updating the documentation for clarity and completeness. I also verified that the documented workflow accurately reflected the implemented chatbot behavior and interactions.

DATE	June 15, 2026 - June 19, 2026	AREA ASSIGNMENT	Website Migration, Technical Documentation, Content Management, and Web Development
TASK	Website Migration, Web Scraping, PCCI Website Documentation and CMS Documentation	SHIFT/TIME	9am-6pm

June 15, 2026:

I worked on web scraping data from the PCCI website to gather information needed for website migration. During this task, I learned how web scraping helps automate data collection, making the migration process faster, more organized, and less prone to manual errors.

June 16, 2026:

I worked on the CSD documentation for the PCCI website by documenting its features, workflows, and user interface components. This task helped me better understand the importance of Customer Solution Documents in providing clear technical references for developers and stakeholders.

June 17, 2026:

I worked on the CSD documentation for the PCCI CMS by documenting system features and content management workflows. I also learned more about how CMS functionalities are documented to ensure that users and developers have a clear understanding of the system.

June 18, 2026:

I worked on the committee officers web scraping task and consolidated the collected information into the PCCI content inventory. During this process, I gained more experience in validating and organizing extracted data to ensure its accuracy before website migration.

June 19, 2026:

I worked on migrating the Regional Chambers and Board of Directors data to the PCCI staging website. This task improved my understanding of website content migration and the importance of verifying migrated data to maintain consistency and accuracy across the website.

DATE	June 22, 2026 - June 26, 2026	AREA ASSIGNMENT	Website Migration, Technical Documentation, CMS Management, and Content Administration
TASK	PCCI Website Content Migration, CMS Documentation, User Training, and Content Inventory	SHIFT/TIME	9am-6pm

June 22, 2026:

I worked on migrating the Contact Inquiries section and the Regional Chambers carousel for the PCCI website. I also reviewed the migrated content to ensure that the information, images, and links were accurate and functioning correctly after migration.

June 23, 2026:

I worked on the PCCI CMS User Training documentation and completed the updates to the PCCI CMS CSD documentation. This task helped me improve my technical writing skills by creating clear user guides and documenting CMS features and workflows.

June 24, 2026:

I continued working on the PCCI CMS User Training documentation and completed the remaining sections. Through this task, I gained a better understanding of how user training materials help end users navigate and utilize the CMS efficiently.

June 25, 2026:

I worked on the content inventory for the Clark Development Corporation website by reviewing and organizing existing website content. This activity enhanced my understanding of content inventory management and its role in supporting website migration and future maintenance.

June 26, 2026:

I updated the CSD and User Training documentation for the PCCI CMS website by reviewing and refining the existing documents. This task reinforced the importance of maintaining accurate technical documentation to ensure consistency between the system and its supporting materials.

DATE	June 29, 2026 - July 3, 2026	AREA ASSIGNMENT	Website Migration, Technical Documentation, Content Management, and Web Development
TASK	Website Migration, CMS Documentation, User Training, and Content Inventory Management	SHIFT/TIME	9AM to 6PM

June 29, 2026:

I worked on updating the Board of Directors data on the PCCI website to ensure that the published information remained accurate and up to date. Through this task, I learned the importance of maintaining accurate website content and validating data before publishing updates to improve information reliability.

June 30, 2026:

I worked on migrating the Contact Inquiries section and updating the Regional Chambers carousel for the PCCI website. This task improved my understanding of website content migration and the importance of organizing website components to provide a better user experience.

July 1, 2026:

I worked on preparing the PCCI CMS User Training Documentation by documenting the system's features and content management processes. This task enhanced my technical writing skills and taught me how user guides help clients understand and efficiently use a content management system.

July 2, 2026:

I continued working on the PCCI CMS User Training Documentation while also completing updates to the Customer Solution Document (CSD) for the PCCI CMS website. This experience strengthened my understanding of documenting website functionalities and creating clear references for both developers and end users.

July 3, 2026:

I worked on the Clark Development Corporation Content Inventory, where I organized and documented website pages and existing content in preparation for future website updates and migration. Through this task, I gained more experience in content organization and learned the importance of maintaining a complete and structured inventory before implementing website improvements.

DATE	July 6, 2026 - July 10, 2026	AREA ASSIGNMENT	Technical Documentation, Content Management, Website Documentation, and Web Development
TASK	Content Inventory Management, User Training Documentation, and CMS Documentation	SHIFT/TIME	9AM to 6PM

July 6, 2026:

I worked on the Clark Development Corporation Content Inventory by organizing and documenting the website's existing pages and content. This task helped me understand the importance of creating a structured content inventory to support website maintenance and future migration activities.

July 7, 2026:

I worked on the DEPDev User Training Documentation, where I documented the system's features and user workflows for end users. Through this task, I improved my technical writing skills and learned how clear user guides contribute to the effective use of software systems.

July 8, 2026:

I continued preparing the PCCI CMS User Training Documentation while completing updates to the Customer Solution Document (CSD) for the PCCI CMS website. This experience enhanced my understanding of documenting website functionalities and producing accurate reference materials for developers and clients.

July 9, 2026:

I continued working on the PCCI CMS User Training Documentation by documenting additional system modules and refining existing instructions. This task improved my attention to detail and reinforced the importance of creating complete and easy-to-follow documentation for end users.

July 10, 2026:

I continued working on the Clark Development Corporation Content Inventory, organizing and validating website content to ensure completeness and accuracy before future website updates. This activity strengthened my skills in content management and demonstrated the importance of maintaining well-organized website information during migration and redevelopment projects.

DATE	July 13, 2026 - July 17, 2016	AREA ASSIGNMENT	Technical Documentation, Content Management, Website Documentation, and Web Development
TASK	Content Inventory Management, User Training Documentation, and Documentation Review	SHIFT/TIME	9AM to 6PM

July 13, 2026:

I continued working on the Clark Development Corporation Content Inventory by organizing and reviewing website content to ensure that all pages and resources were properly documented. This task improved my attention to detail and reinforced the importance of maintaining an accurate content inventory before website migration and updates.

July 14, 2026:

I worked on updating the Customer Solution Document (CSD) and User Training Documentation by refining existing documentation and verifying that the documented system workflows matched the current website implementation. This activity strengthened my technical writing skills and emphasized the importance of producing clear and accurate documentation for clients and future developers.

July 15, 2026:

I reviewed previously completed documentation and made revisions based on feedback from my supervisors to improve the clarity and consistency of the documents. During this process, I learned the value of continuous review and quality assurance in producing professional technical documentation.

July 16, 2026:

I continued reviewing and organizing project documentation while verifying that all completed deliverables were complete and properly formatted before submission. This task helped me understand the importance of document consistency, organization, and quality control in supporting software development projects.

July 17, 2026:

I finalized the remaining documentation assigned to me and organized my completed outputs in preparation for the succeeding internship activities and project turnover. This experience allowed me to appreciate the importance of proper documentation management and ensuring that project deliverables are complete, organized, and ready for future reference.
